

Reilly Baggs

Project Consultant,
SAGE Engineering Services
MBT Class of 2019

Reilly currently works as a Project Consultant at SAGE Engineering Services in Oakville, ON, where she provides solutions for equipment and compliance within the regulated industries. As a Project Consultant she combines her previous training and experience in engineering with soft skills like communication and industry specific skills learned in MBT.

The MBT material that she uses most commonly in her current role is regulatory knowledge and the application of GxP (“good practice” quality guidelines and regulation). Her favourite aspect of the program, however, was the integrative science-business project. This experience translating technical knowledge into business needs and delivering pitches gave her the confidence and skills needed to work with clients in her current role as a consultant.

Within the MBT program, she completed her practicum with the W21C Research and Innovation Center focusing on human factors in medicine and health technology. Before joining the MBT program, Reilly had previously worked at General Electric, Power & Water and Ontario Power Generation Nuclear. While embracing the learnings in these technical fields, Reilly remained interested in health and biotechnology – fields that she had always been drawn to. She was motivated to translate her experience to a new industry and credits MBT with helping her follow this passion. Having a big picture view of the Pharmaceutical and Biotech industry allowed her to pursue her career path with intention.
